SAFETY INFORMATION

1. Parts that have special safety characteristics are identified by the  symbol on schematics or by special notes on the parts list. Use only replacement parts that have critical characteristics recommended by the manufacturer.

2. Make leakage current or resistance measurements to determine that exposed parts are acceptably insulated from the supply circuit before returning the unit to the customer.

Use the following checks to perform these measurements:

A. Leakage Current Hot Check-With the unit completely reassembled, plug the AC line cord directly into a 120V AC outlet. (Do not use an isolation transformer during this test.) Use a leakage current tester or a metering system that complies with American National Standards Institute (ANSI) C101.1 "Leakage Current for Appliances" and Underwriters Laboratories (UL) 6500/60065 / IEC 60065 paragraph 9.1.1. With the unit AC switch first in the ON position and then in OFF position, measure from a known earth ground (metal waterpipe, conduit, etc.) to all exposed metal parts of the unit (antennas, handle bracket, metal cabinet, screwheads, metallic overlays, control shafts, etc.), especially any exposed metal parts that offer an electrical return path to the chassis. Any current measured must not exceed 0.5 milliamp. Reverse the unit power cord plug in the outlet and repeat test. ANY MEASUREMENTS NOT WITHIN THE LIMITS SPECIFIED HEREIN INDICATE A POTENTIAL SHOCK HAZARD THAT MUST BE ELIMINATED BEFORE RETURNING THE UNIT TO THE CUSTOMER.

B. Insulation Resistance Test Cold Check-(1) Unplug the power supply and connect a jumper wire between the two prongs of the plug. (2) Turn on the power switch of the unit. (3) Measure the resistance with an ohmmeter between the jumpered AC plug and each exposed metallic cabinet part on the unit. When testing 3 wire products, the resistance measured to the product enclosure should be between 2 and infinite M_Ωs. Also, the resistance measured to exposed input/output connectors should be between 4 and infinite M_Ωs. When testing 2 wire products, the resistance measured to exposed input/output connectors should be between 4 and infinite M_Ωs. If it is not within the limits specified, there is the possibility of a shock hazard, and the unit must be repaired and rechecked before it is returned to the customer.

ELECTROSTATIC DISCHARGE SENSITIVE (ESDS) DEVICE HANDLING

This unit contains ESDS devices. We recommend the following precautions when repairing, replacing or transporting ESDS devices:

- Perform work at an electrically grounded work station.
- Wear wrist straps that connect to the station or heel straps that connect to conductive floor mats.
- Avoid touching the leads or contacts of ESDS devices or PC boards even if properly grounded. Handle boards by the edges only.
- Transport or store ESDS devices in ESD protective bags, bins, or totes. Do not insert unprotected devices into materials such as plastic, polystyrene foam, clear plastic bags, bubble wrap or plastic trays.

CAUTION: THE BOSE® LIFESTYLE® 135 AND CINEMATE® 1 SR, CONTAINS NO USER SERVICEABLE PARTS. TO PREVENT WARRANTY INFRACTIONS, REFER SERVICING TO WARRANTY SERVICE STATIONS OR FACTORY SERVICE.

PROPRIETARY INFORMATION

THIS DOCUMENT CONTAINS PROPRIETARY INFORMATION OF
BOSE CORPORATION WHICH IS BEING FURNISHED ONLY FOR
THE PURPOSE OF SERVICING THE IDENTIFIED BOSE PRODUCT
BY AN AUTHORIZED SERVICE CENTER OR OWNER OF THE BOSE
PRODUCT, AND SHALL NOT BE REPRODUCED OR USED FOR ANY
OTHER PURPOSE.

Product Overview

Lifestyle® 135 Home Entertainment System

The main components of a Lifestyle® 135 Home Entertainment System are a AV35 control console, Soundbar, and Bass module. The AV35 control console is the same as sold with the Bose® Lifestyle® V25/35 Home Entertainment Systems; repair information for the control console is covered in the AV20/35 service manual. The AV35 control console connects to the soundbar. All devices connect to the AV35 control console.

The soundbar transmits wireless audio to the bass module. The bass module pairs to the soundbar by storing the soundbar device ID. Up to four systems can operate in close proximity. If more than four systems are used, SMB cable part number 331731-0010 should be used to make a wired connection between the bass module and soundbar. The wired connection will also help resolve situations where other wireless components interfere with the wireless connection of the Bose® system.

CineMate® 1 SR

The main components of a CineMate 1 SR Digital Home Theater Speaker System are a Soundbar and Bass module.

The AUX input is not a second input. The TV audio output connects to the soundbar TV input. Other devices such as a cable/SAT box and blu-ray player should have audio connections to the TV and also to the soundbar AUX input. The soundbar will compare the signal at the TV input to the signal at the AUX input and chose the best quality signal. Example, if the TV output is PCM 2.0 and the AUX input is 5.1, the soundbar will switch to the AUX input. It will only switch to the AUX input if the signal quality is better at the AUX input and the content is identical to the signal connected at the TV input.

The soundbar transmits wireless audio to the bass module. The bass module pairs to the soundbar by storing the soundbar device ID. Up to four systems can operate in close proximity. If more than four systems are used, SMB cable part number 331731-0010 should be used to make a wired connection between the bass module and soundbar. The wired connection will also help resolve situations where other wireless components interfere with the wireless connection of the Bose® system.

SMB cable part number 331731-0010 is 4m and is intended for use by the customer. For applications requiring a longer wired connection, SMB to F cable part number 345328-0010 is available. Two of these cables are needed to make a connection at the soundbar and bass module. Up to 100' of coax cable can be used between the two cables.

Part List Notes

1. This part is not normally available from customer service. Approval from the Field Service Manager is required before ordering.
2. The individual parts located on the PCB are listed in the part list.
3.  This part is critical for safety purposes. Failure to use a substitute replacement with the same safety characteristics as the recommended replacement part might create shock, fire and/or other hazards.
4. This part is referenced for informational purposes only. It is not stocked as a repair part. Refer to the next higher or lower level assembly for a replacement part.
5. This part is used on the CineMate® 1SR variant only
6. This part is used on the Lifestyle® 135 variant only
7. When replacing the DSP PCB in a CineMate 1 SR, set the country variant. Refer to the procedures on page 76

Sound Bar Disassembly Procedures

1. Top Cover Removal

1.1 Remove the 12 screws indicated in Figure 3 securing the top cover.

Important Note:

1. When replacing the top cover screws, follow the sequence in Figure 3 to avoid causing the top cover to bow.
2. Ensure no wire harness obstructs a screw hole or gets pinched by the top cover when replaced. When removing any internal part, make note of the wire dressing and it ensure it is maintained after replacing a part.

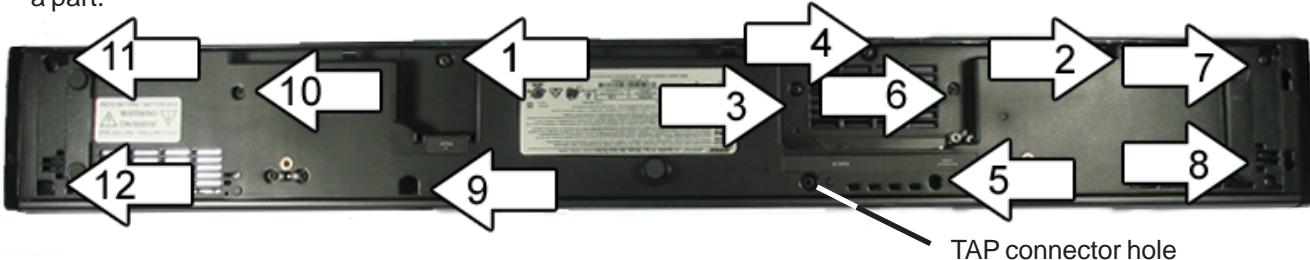

Figure 3. Top Cover Screws

1.2 Flip over the sound bar so the grille is facing up.

1.3 For CineMate® 1SR version only, remove the AdaptIQ® door on the left side.

1.4 Grasp the top cover at both ends and lift off.

Figure 4. Phase Guide Speaker Screws

2. Phase Guide Speaker Removal (Left or Right)

2.1 Remove the two screws indicated in Figure 4 securing the phase guide to the bottom panel.

2.2 Lift out the phase guide and remove the wire connector from the PCB.

Note: When replacing the phase guide, ensure the wire harness is wrapped along the back of the speaker and under the phase guide. For the right phase guide, ensure the wire harness does not extend around the AC PCB shield. See Figure 5 and 6, Right Phase Guide Wire Routing.

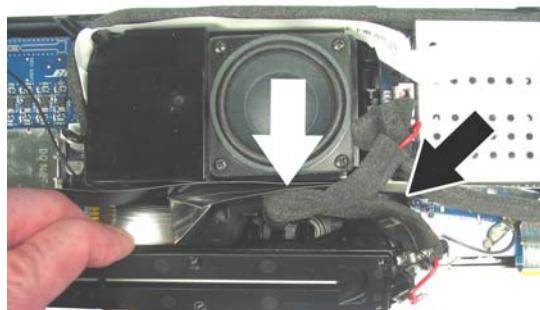

Figure 5. Phase Guide Wire Routing

Figure 6. Right Phase Guide Wire Routing

Sound bar Disassembly Procedures

3. Twiddler® Removal

3.1 Perform procedure 1 first.

3.2 Remove the four screws indicated in Figure 7.

3.2 Lift out the Twiddler

Note: Make note of the wiring configuration for use when attaching a replacement transducer.

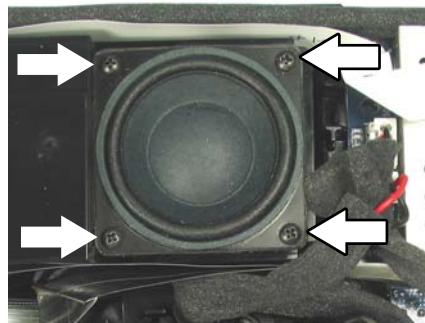

Figure 7. Twiddler Removal

4. Front Tweeter Removal

4.1 Perform procedure 1 and 8 first.

Note: Removing the IR/LED PCB will release the tweeter harness. Make note of the wire harness routing and ensure it is properly wired under the IR/LED PCB when replaced.

4.2 Remove the two screws indicated in Figure 8.

4.3 Lift out the front tweeter.

Figure 8. Front Tweeter Removal

5. DSP PCB Removal

5.1 Perform procedure 1 and 2 (left phase guide) first.

5.2 CineMate® 1SR - remove the AdapIQ bezel by releasing the two snaps indicated. Figure 9.

5.3 Remove the cables from the PCB. Use a U.FL extraction tool, such as Hirose part number U.FL-LP-N-2(01), to remove the U.FL connector.

Use care when removing the U.FL connector to avoid damaging the connector.

5.4 Remove the screw indicated in Figure 10 securing the DSP PCB.

5.5 While using care not to bend the RF antenna, lift off the DSP PCB.

Note: When replacing the DSP PCB, use care not to bend the RF antenna or damage the U.FL connector when reconnecting. Press gently straight down to insert the U.FL connector. Excessive or angled pressure will damage the connector. When properly installed, the antenna cable will rotate freely about the connector. Do not rotate more than 1/8th of a turn to avoid damaging the connector.

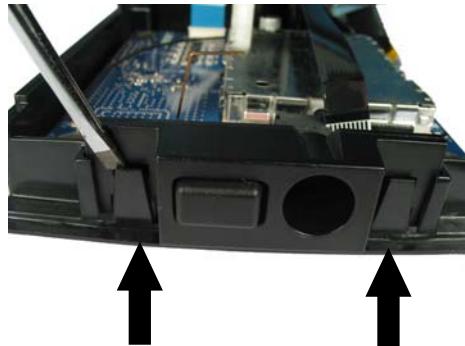

Figure 9. AdapIQ Bezel Removal

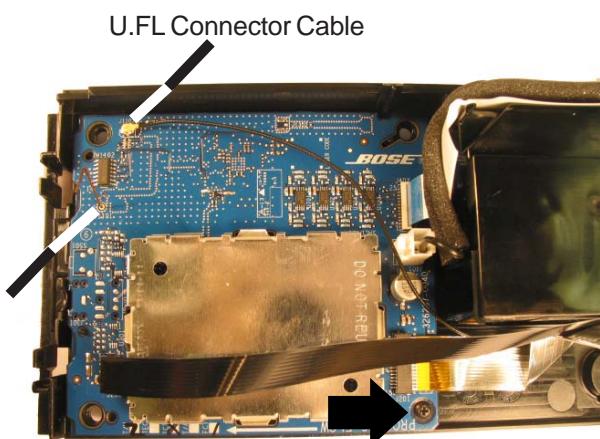

Figure 10. DSP Removal

Sound Bar Disassembly Procedures

6. AMP PCB Removal

6.1 Perform procedure 1 first.

6.2 Remove the two screws indicated in Figure 11 securing the Amp PCB.

6.3 Remove the wire harness connectors and ribbon cables from the PCB. Lift out the PCB.

Note: 1. When installing the Amp PCB, ensure the wires are properly dressed. Refer to Figure 11. Amp PCB Removal.

Note: 2. Avoid removing the metal heat spreader plate (located on the bottom of the AMP PCB). If it was removed, ensure a void-free thermal gel contact between the plate and the three IC location markings on the PCB. Reapply thermal gel if needed, Chromerics 65-00-GEL30-0010, Bose part number 369952-001S

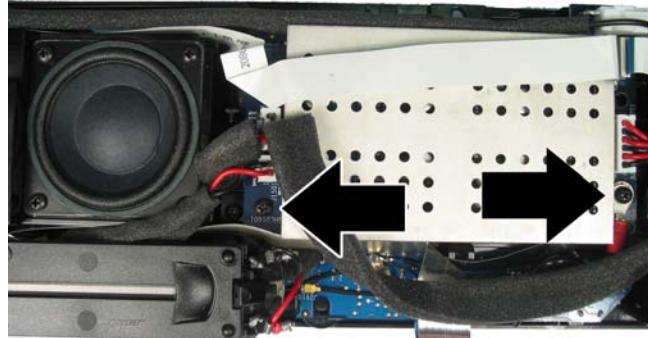

Figure 11. Amp PCB Removal

7. I/O PCB Removal

7.1 Perform procedure 1 and 6 first.

7.2 Remove the three screws indicated in Figure 12 securing the connector backup and I/O PCB. Lift out the connector backup and I/O PCB together.

7.3 Remove the ribbon cable from the I/O PCB. Remove the U.FL connector only if needed. Use a U.FL extraction tool, such as Hirose part number U.FL-LP-N-2(01), to remove the U.FL connector. Use care when removing the U.FL connector to avoid damaging the connector.

Note: When replacing the I/O PCB, use care not to damage the U.FL connector when reconnecting. Press gently straight down to insert the U.FL connector. Excessive or angled pressure will damage the connector. Apply glue to the cable as shown in Figure 12 to relieve strain on the connector. When properly installed, the antenna cable will rotate freely about the connector. Do not rotate more than 1/8th of a turn to avoid damaging the connector.

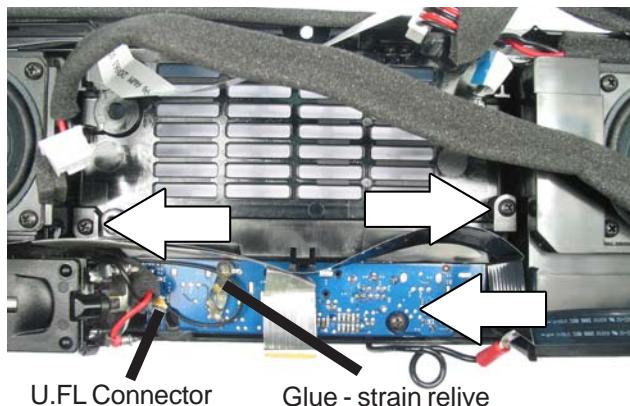

Figure 12. I/O PCB Removal

Figure 13. IR/LED PCB Mesh

8. IR/ LED PCB Removal

8.1 Perform procedure 1 first.

8.2 CineMate® 1SR only - lift off the mesh covering the IR/ LED PCB. Figure 13.

8.3 Remove the screw indicated in Figure 14 securing the IR/LED PCB. Lift off the IR/LED PCB.

Note: It might be necessary to replace the mesh covering if the adhesive does not adhere when replaced.

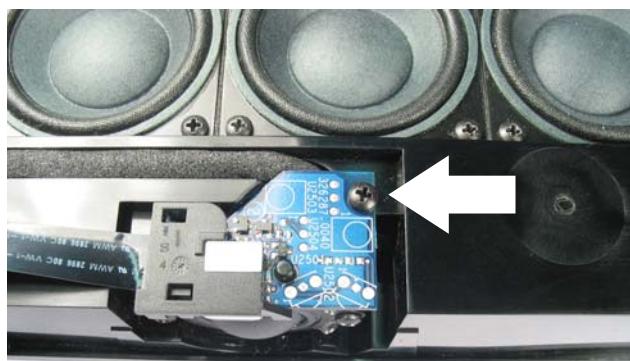

Figure 14. IR/LED PCB

Sound Bar Disassembly Procedures

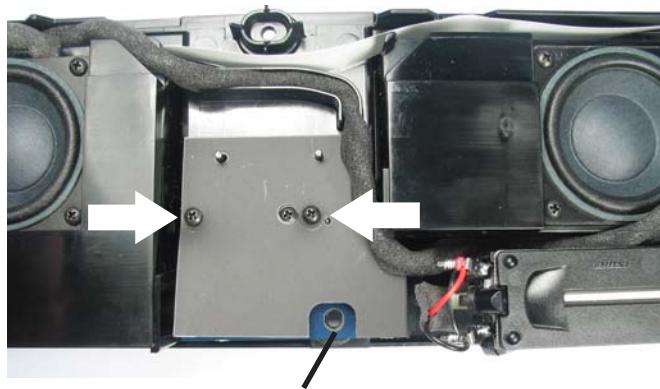

9. AC PCB Removal

9.1 Perform procedure 1.

9.2 Remove the two screws indicated in Figure 15 securing the AC PCB and insulator. Lift off the AC PCB and insulator

9.3 Remove the wire connector from the AC PCB.

Note: Ensure the AC PCB insulator is properly positioned over the AC PCB when installing. The open groove aligns with the opening for the top cover screw.

Align AC PCB insulator with top cover screw hole

Figure 15. AC PCB

10. Power Supply PCB Removal

10.1 Perform procedure 1 and 2.

10.2 Remove the three screws indicated in Figure 16 securing the power supply PCB. Remove the wire harness connectors and ribbon cables. Lift off the power supply PCB.

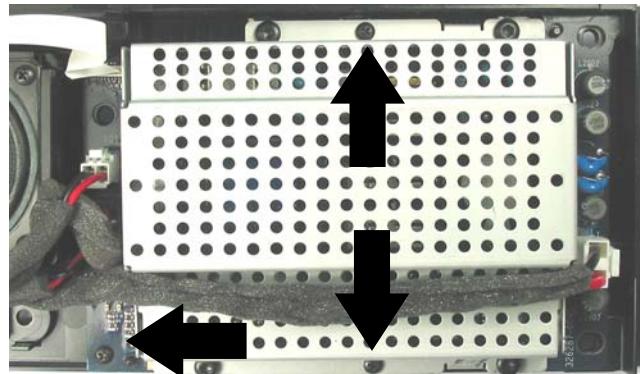

Figure 16. Power Supply PCB Removal

Lifestyle® 135 Bass Module Disassembly Procedures

1. Rear Cover Removal

1.1 Remove the four screws indicated in Figure 17 securing the rear cover.

Note: When replacing the rear cover, tighten the screws in the order shown in Figure 17 to ensure the cover aligns properly.

1.2 Lay the bass module on its' right side. Rotate the rear cover to gain access to the AC wire harness. Disconnect the AC wire harness from the power supply PCB.

Figure 17. Rear Cover Removal

2. I/O PCB Removal

2.1 Perform procedure 1 first

2.2 Slightly rotate the cover to gain access to the AC wire harness. Disconnect the AC wire harness as shown in Figure 18.

2.3 Use a U.FL extraction tool, such as Hirose part number U.FL-LP-N-2(01), to disconnect the antenna's U.FL connector. Figure 19 - Antenna Cable

Use care when removing antenna's U.FL connector to avoid damaging the connector.

Note: When replacing the I/O PCB, use care not to damage the antenna's U.FL connector when reconnecting. Press gently straight down to insert the U.FL connector. Excessive or angled pressure will damage the connector. When properly installed, the antenna cable will rotate freely about the connector. Do not rotate more than 1/8th of a turn to avoid damaging the connector.

2.4 With the cover laying flat on the bench, remove the two screws indicated in Figure 19 securing the connector cover. Lift off the connector cover.

Important Note: To reduce stress on the U.FL connector, the connector cover should be in place before connecting the antenna cable's U.FL connector. Be sure to leave enough cable length so the cable can be easily attached to the U.FL connector without stressing the connector.

Note: When replacing the connector cover, ensure the antenna cable is properly dressed under the groove in the connector cover.

Disconnect AC
Wire Harness

Figure 18. AC Wire Harness

Figure 19. Connector Cover Removal

(Continued on next page)

Lifestyle® 135 Bass Module Disassembly Procedures

2. I/O PCB Removal (continued)

2.5 Remove the ribbon cable.

2.6 Remove the screw indicated in Figure 20 securing the I/O PCB. Lift out the I/O PCB.

3. Power Supply PCB Removal

3.1 Perform Procedure 1, 2.3, and 2.4 first

3.2 Remove the two screws indicated in Figure 21 securing the heat sink. Lift out the heat sink.

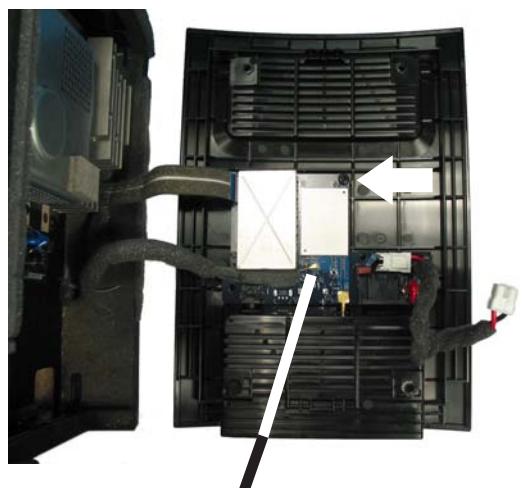

Note: When replacing the heatsink, ensure the ribbon cable is routed under the heatsink.

3.3 Remove the six screws indicated in Figure 22 securing the power supply shield and PCB. Lift off the power supply shield and PCB.

Note: 1. When installing the power supply PCB, ensure the thermal pad is located over U1001 and L1001. If the thermal pad is moved, it should be replaced because the compressed areas on the thermal pad will no longer align with the heatsink. It is important that there is good thermal contact between the thermal pad and heatsink.

2. When replacing the shield, ensure the conductive pad is located as shown in Figure 21.

3. When replacing the shield, first secure the two screws indicated in Figure 22 to ensure proper alignment of the shield.

Antenna Cable

Figure 20. DSP PCB Removal

Setting up a Computer to Issue TAP Commands

1. Open a terminal window. Click: Start/Program/Accessories/Hyper terminal/Hyperterminal

2. In the “Connection Description” window, type the name “ls135” then click “OK”; any name may be entered.

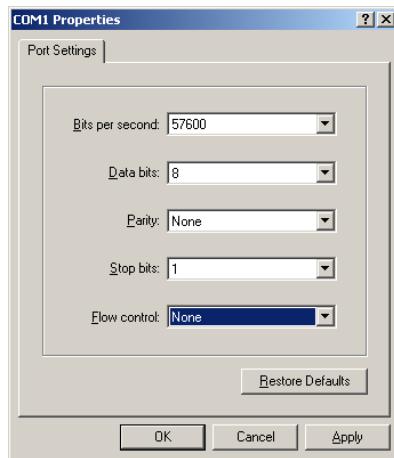

3. In the “Connect To” window, select the COM port on your computer that you will be connecting the soundbar to and then click OK.

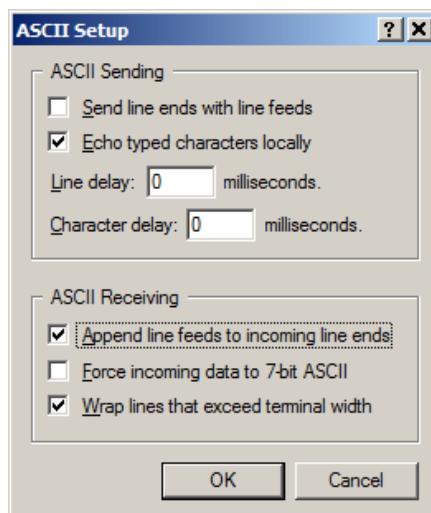

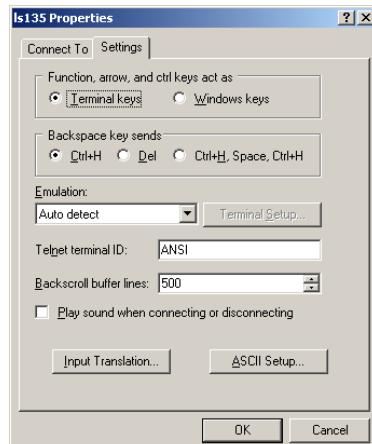

6. In the Settings window, click on ASCII setup and make the selections in the various fields as shown.

4. In the “COM1 Properties” window, make the selections in the various fields as shown.

5. In the Hyperterminal window, click on File/Properties. In the Properties window, click on the Settings tab, make the selections in the various fields as shown.

TAP Connections to Sound Bar and Bass Module

1. CineMate® 1 SR Sound Bar TAP Cable Connection

1.1 Connect TAP cable part number 264565 to a COM port on your computer.

1.2 Connect other end of the TAP cable to the TAP connection on the Sound bar. This is located on the back of the sound bar above the AUX input.

2. Lifestyle® 135 Sound Bar TAP Cable Connection

2.1 Connect TAP cable part number 264565 to a COM port on your computer.

2.2 Connect the other end of the TAP cable 264565 to the TAP connection on the Sound bar. This is located on the back of the sound bar to the right of the Audio Input.

2.3 Connect TAP cable part number 299656 to the DIN connector on the Sound bar. Connect either a 9 volt battery or 9 volt DC power supply to the 9 Volt battery connector. This is done to simulate the turn on voltage sent from an AV35 control console.

2.4 Connect TAP cable 299656 RCA connector to the output of a A/D converter.

Note: This TAP cable is only used to supply the 9 Volt turn on signal and the digital audio signal.

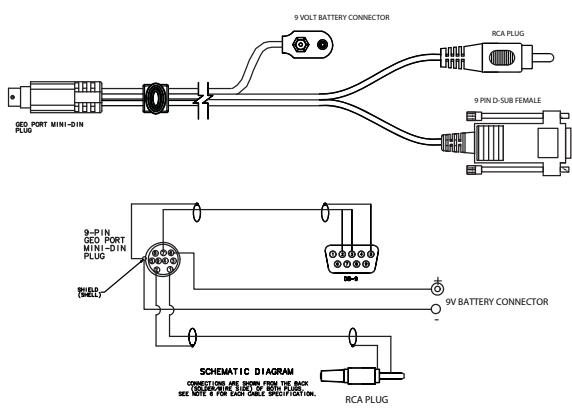

Figure 23. TAP Cable 299656

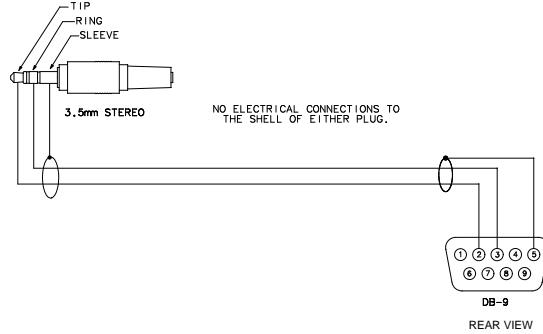

Figure 24. TAP Cable 264565

Figure 25. Soundbar TAP Port

Pairing a Sound Bar to a Bass Module

Overview

The sound bar RF ID is stored in the bass module. Once the RF ID is stored, the sound bar will only communicate to the bass module it has been paired with.

If you are testing a customer soundbar or bass module with a test soundbar or bass module, it is necessary to pair the customer device to the bench test device.

If you pair a customer soundbar or bass module to a test device, provide the customer instructions to pair their system when returned.

A maximum of four paired sound bar and bass modules can operate in close proximity.

Wired Connection

If using in an application such as a hotel or areas where RF interference might occur, a SMB wired connection should be used.

When using the wired connection, the sound bar will pair automatically with the bass module.

331731-0010 : 4 meter SMB to SMB Coax Cable (used for end user wired connection)

345328-0010 : 1 meter SMB to F Coax Cable (two used for wiring up to 100')

1. CineMate® 1SR End User Pairing Instructions

1.1 Unplug the Acoustimass® module AC power cord.

1.2 Remove the door on the end of the speaker array.

1.3 Press and hold the ADAPTiQ® button for 3-4 seconds until the status indicator starts slowly blinking orange.

1.4 Plug the Acoustimass module AC power cord in the AC outlet.

Pairing is complete when the Acoustimass module status indicator becomes solid orange and the speaker array status indicator turns off.

2. Lifestyle® 135 End User Pairing Instructions.

2.1 Using the system cable, connect the soundbar to the control console.

2.2 Apply power to the console, soundbar, and bass module.

2.3 Press the Setup button on the control console and select the "Reconnect Acoustimass" menu item. Follow the on-screen instructions.

3. Pairing using a SMB cable

3.1 Connect SMB cable, part number 331731-0010, to the sound bar and bass module.

3.2 Connect power to the soundbar and bass module.

3.3 A solid orange LED on the bass module indicates pairing is complete.

3.4 To avoid the soundbar or bass module from pairing with another system in the repair area, remove power from both components before removing the SMB cable.

Setting The Region Variant - CineMate® 1SR Only

1. Setting the Region Variant - CineMate 1SR Only

There are 4 variants of the CineMate 1 SR sound bar (US/AIM, EURO/UK, Asia Pacific, Japan) that have separate AdaptiQ® language lists. When replacing DSP PCB in a US, Asia/PAC, and Japan variant, the variant needs to be set to present the proper AdaptiQ language selection list. The UK/EURO variant does not need to be set. The US, Asia/PAC, and Japan version use the same version of a programmed IC containing the language list. The EU/UK version uses a programmed IC that contains just the EU/UK language list.

1.1 Refer to pages 74 and 75 to setup a computer to issue TAP commands.

1.2 Enter the TAP command TN 65 ON, to turn on the sound bar.

1.3 Enter the appropriate TAP command from the table below to set the variant.

Variant	TAP Command
US	TN 33 1
Asia/Pac	TN 33 3
Japan	TN 33 4

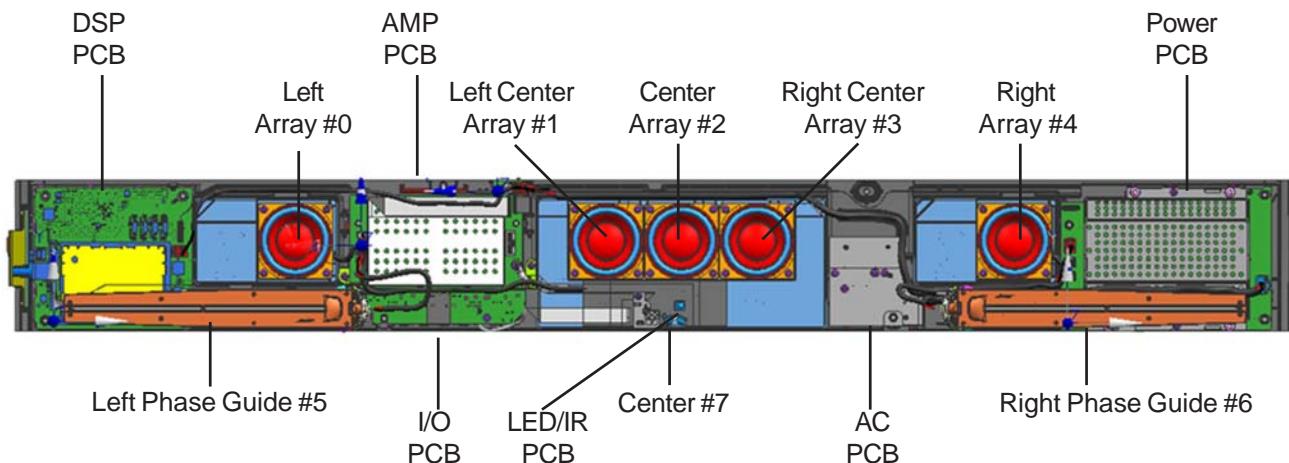

Figure 26. Transducer and PCB Identification

Lifestyle® 135 Performance Verification Procedures

Required Equipment

1. Tera Term terminal emulator - download at <http://sourceforge.jp/projects/ttssh2/>
2. TAP cable 264565 (used for TAP commands)
3. TAP cable 299656 (used for COAX input and Turn on voltage)
4. An A/D converter and audio generator
5. Lifestyle® 135 Bass Module
6. SMB cable part number 331731-0010 or equivalent.
7. Computer setup to issue TAP commands - see pages 73 and 74 for instructions.
8. A paired soundbar and bass module - see page 75 for instructions.

1. Sound Bar Air Leak Test

- 1.1** Issue the following TAP commands

SO BDSP (resets DSP)
 SO L,ALL (sends left input to all channels)
 SO 0,8 (mutes bass channel)
 VO CB 20 (sets volume level)

- 1.2** Apply a 285 Hz, 85 mVrms signal to the A/D converter.

- 1.3** Listen for any air leaks from sealed enclosures for the twiddlers, tweeter, and phase guide arrays.

2. Sound Bar Buzz Test and Sweep Test

- 2.1** Issue the following TAP commands

SO BDSP (resets DSP)
 VO CB 20 (sets volume level)
 SO 0,8 (mutes bass channel)

- 2.2** Apply a 200 Hz, 85 mVrms signal to the left input of the A/D converter.

- 2.3** Sweep the audio generator form 200 Hz to 2 kHz.

- 2.4** Listen for buzz, rub, or extraneous sounds. Localize and repair any buzz. Replace any transducer that rubs or produces extraneous sounds.

- 2.5** Issue the TAP command VO CB 20 to set the volume level.

- 2.6** Apply a 200 Hz, 60 mVrms signal to the left and right input

- 2.7** Sweep the audio generator form 200 Hz to 2 kHz.

2.8 Listen for buzz, rub, or extraneous sounds. Localize and repair any buzz. Replace any transducer that rubs or produces extraneous sounds.

2.9 Apply a 200 Hz, 85 mVrms signal to the right input of the A/D converter.

2.10 Listen for buzz, rub, or extraneous sounds. Localize and repair any buzz. Replace any transducer that rubs or produces extraneous sounds.

3. Transducer Operational Test

3.1 Issue TAP commands in the table below to generate audio for each transducer. The sound bar will generate this tone internally

3.2 Listen for clean undistorted audio from each transducer.

3.3 Refer to Figure 26 on page 76 for transducer location.

(SO FREQ LEVEL SPKR)

TAP Command	Action
SO 350 -30 0	Left #0 Array On
SO 0 -100 ALL	Mute All
SO 350 -30 1	Left Center #1 Array On
SO 0 -100 ALL	Mute All
SO 350 -30 2	Center #2 Array On
SO 0 -100 ALL	Mute All

SO 0 -100 ALL	Mute All
SO 350 -30 4	Right #4 Array On
SO 0 -100 ALL	Mute All
SO 2500 -30 5	Left Phase Guide # 5 On
SO 0 -100 ALL	Mute All
SO 2500 -30 6	Right Phase Guide #6 On
SO 0 -100 ALL	Mute All
SO 350 -30 7	Center #7 Array On
SO 0 -100 ALL	Mute All
SO 100 -30 8	Bass Module On
SO 0 -100 ALL	Mute All

4. Verify Bass Module Link

- 4.1** Issue the following TAP commands

SO BDSP (resets DSP)
 VO CB 20 (sets volume level)
 SO L,8 (Routes left channel to bass box)

- 4.2** Apply a 85mv, 40 Hz signal to the A/D converter.

- 4.3** Listen for clean undistorted audio from the bass module.

Lifestyle® 135 Performance Verification Procedures

<p>5. Bass Module Air Leak</p> <p>5.1 Issue the following TAP commands</p> <p>SO BDSP (resets DSP) VO CB 20 (sets volume level)</p> <p>5.2 Mute the sound bar channels by issuing the following TAP commands</p> <p>SO 0,0 SO 0,1 SO 0,2 SO 0,3 SO 0,4 SO 0,5 SO 0,6 SO 0,7</p> <p>5.3 Apply a 50 Hz, 100 mVrms signal to the A/D converter</p> <p>5.4 Listen for air leaks from the bass module seams and module cover.</p> <p>6. This indicates the soundbar and bass module are paired.</p> <p>8.5 Verify RSSI (line 5) is (< -20) AND (> -40) Note: RSSI (Receive Signal Strength Indicator)</p>
---	--

CineMate® 1SR Performance Verification Procedures

Required Equipment

1. Tera Term terminal emulator - download at <http://sourceforge.jp/projects/ttssh2/>
2. TAP cable 264565 (used for TAP commands)
3. An A/D converter and audio generator
5. A Coax to Optical converter
4. SMB cable part number 331731-0010 or equivalent.
5. Computer setup to issue TAP commands - see page 73 and 74 for instructions.
6. A paired soundbar and bass module - see page 75 for instructions.

1. Sound Bar Air Leak Test

- 1.1** Issue the following TAP commands

TN 65 ON (forces speaker array to active state)
AU C (select TV Coax input)
SO L,ALL (sends left input to all channels)
SO 0,8 (mutes bass channel)
VO CB 20 (sets volume level)

- 1.2** Apply a 285 Hz, 85 mVrms signal to the A/D converter.

- 1.3** Connect the Coax (SPDIF) output of the A/D converter to the TV Coax input of the sound bar.

- 1.4** Listen for any air leaks from sealed enclosures for the twiddlers, tweeter, and phase guide arrays.

2. Sound Bar Buzz and Sweep Test

- 2.1** Issue the following TAP commands

TN 65 ON (forces speaker array to active state)
SO BDSP (resets DSP)
AU C (select TV Coax input)
VO CB 20 (sets volume level)
SO 0,8 (mutes bass channel)

- 2.2** Apply a 200 Hz, 85 mVrms signal to the A/D converter left input.

- 2.3** Connect the Coax (SPDIF) output of the A/D converter to the TV Coax input of the sound bar.

- 2.4** Sweep the audio generator form 200 Hz to 2 kHz.

- 2.5** Listen for buzz, rub, or extraneous sounds. Localize and repair any buzz. Replace any transducer that rubs or produces extraneous sounds.

2.6 Issue the TAP command VO CB 20 to set the volume level.

2.7 Apply a 200 Hz, 60 mVrms signal to the left and right input

2.8 Sweep the audio generator form 200 Hz to 2 kHz.

2.9 Listen for buzz, rub, or extraneous sounds. Localize and repair any buzz. Replace any transducer that rubs or produces extraneous sounds.

2.10 Apply a 200 Hz, 85 mVrms signal to the right input of the A/D converter.

2.11 Listen for buzz, rub, or extraneous sounds. Localize and repair any buzz. Replace any transducer that rubs or produces extraneous sounds.

3. Transducer Operational Test

- 3.1** Issue the following TAP command TN 65 ON (forces speaker array to active state)

- 3.2** Issue TAP commands in the table below to generate audio for each transducer. The sound bar will generate this tone internally

- 3.3** Listen for clean undistored audio from each transducer.

- 3.4** Refer to Figure 26 on page 76 for transducer location.

(SO FREQ LEVL SPKR)

<p>4. Verify Bass Module Link</p> <p>4.1 Issue the following TAP commands</p> <p>TN 65 ON (forces speaker array to active state) SO BDSP (resets DSP) AU C (select TV Coax input) VO CB 20 (sets volume level) SO L,8 (Routes left channel to bass box)</p> <p>4.2 Apply a 85mv, 40 Hz signal to the A/D converter.</p> <p>4.3 Connect the Coax (SPDIF) output of the A/D converter to the TV Coax input of the sound bar.</p> <p>4.4 Listen for clean undistorted audio from the bass module.</p> <p>5. Bass Module Air Leak</p> <p>5.1 Issue the following TAP commands</p> <p>TN 65 ON (forces speaker array to active state) SO BDSP (resets DSP) AU C (select TV Coax input) VO CB 20 (sets volume level)</p> <p>5.2 Mute the sound bar channels by issuing the following TAP commands</p> <p>SO 0,0 SO 0,1 SO 0,2 SO 0,3 SO 0,4 SO 0,5 SO 0,6 SO 0,7</p> <p>5.3 Set the bass box tone control to the center position.</p> <p>5.4 Apply a 50 Hz, 100 mVrms signal to the A/D converter</p> <p>5.5 Connect the Coax (SPDIF) output of the A/D converter to the TV Coax input of the sound bar.</p> <p>5.6 Listen for air leaks from the bass module seams and module cover.</p>	<p>6. Bass Module Sweep Test</p> <p>6.1 Issue the following TAP commands</p> <p>TN 65 ON (forces speaker array to active state) SO BDSP (resets DSP) AU C (select TV Coax input) VO CB 20 (sets volume level)</p> <p>6.2 Apply a 40 Hz, 100 mVrms signal to the A/D converter.</p> <p>6.3 Connect the Coax (SPDIF) output of the A/D converter to the TV Coax input of the sound bar.</p> <p>6.4 Sweep the audio generator from 40 - 300 Hz.</p> <p>6.5 Listen for buzz, rub, or extraneous sounds. Localize and repair any buzz. Replace any transducer that rubs or produces extraneous sounds.</p> <p>7. RF Testing, Wired</p> <p>7.1 Connect SMB cable part number 331731-0010 to the soundbar Acoustimass® and bass module speaker array connectors.</p> <p>7.2 Enter TAP command "RF DI" to retrieve the Device ID from the soundbar. Expected Output: DEVICE_ID : 0x2001742B MANF_ID : 0x0000B05E PROD_ID : 0x01000001</p> <p>7.3 Read back connection status by issuing TAP command "rf gs" to the soundbar Expected Output: 0x0015 bytes, 0x0001 slaves, showing 0x0001 NWK_STATUS : 0x1C SAMPLE_RATE : 0x264B ACH_USED : 0x0020 Slave 0X01: DEVICE_ID : 0x2001742B MANF_ID : 0x0000B05E PROD_ID : 0x01000005 ACHUSED : 0x0020 WS_SDC_EN : 0x03</p> <p>7.4 Verify the network ID (line 1, word 1) matches the Device ID retrieve in step 7.2. This indicates the soundbar and bass module are paired.</p> <p>7.5 Verify NWK_STATUS=0x1C</p>
---	---

CineMate® 1SR Performance Verification Procedures

8. Antenna and RF Testing, Wireless

8.1 Place the port of the bass module 3 feet from the left side of the sound bar.

Note: Surfaces in the test area will impact this measurement. Comparing results to a known good system will improve the accuracy of this test for your area.

8.2 Read back connection status by issuing TAP command "rf gs" to the bass module

Expected Output:

0x20001B50 0x0000B05E 0x00001ED5
0x99
0x0020
0x00- 0x00- 0x00- 0x00- 0x00- 0x05+ 0x00- 0x00-
0x00 0x00- 0x00- 0x00- 0x00- 0x00- 0x00- 0x00-

-37

40275

0x0D

832

0x0020

8.3 Verify RSSI (line 5) is (< -20) AND (> -40)

Note: RSSI (Receive Signal Strength Indicator)

8.4 Verify network status (line 7) = 0x0D

9. Input Test

9.1 Issue the following TAP commands

TN 65 ON (forces speaker array to active state)

SO 0,8 (mutes bass channel)

VO CB 20 (sets volume level)

SO L,ALL (sends left input to all channels)

*SO R,ALL (sends right input to all channels)

*use the right channel for at least one test to ensure the right channel is working.

9.2 When testing digital inputs, apply a 200 Hz, 85 mVrms signal to the A/D converter.

9.3 When testing the analog input, apply a 200 Hz, 85 mVrms signal to the analog input.

9.4 Refer to the table below for connections and TAP commands.

9.5 Listen for clean undistorted audio.

Functional test for input..	Connect the A/D converter Coax output to Soundbar input..	Connect the Coax/Optical converter output to Soundbar input..	Connect the Analog signal generator to Soundbar input..	Issue TAP command
TV COAX	TV COAX	-	-	AU C
AUX COAX	AUX COAX	-	-	AU X
TV Optical	-	TV Optical	-	AU O
AUX Optical	-	AUX Optical	-	AU P
TV Analog	-	-	TV Analog	SO AL,ALL AU A

Revision History

DATE	REV	ECN	Description
09/26/11	00		Initial Release
09/27/11	01		Updated content in test and disassembly
11/15/11	02	51264	Updated bass module and sound bar DSP PCBs
12/05/12	03	51859	New bass module AC cable
12/23/11	04	51363	New power pack and doc
02/29/12	05		New cables
07/16/12	06	53312	Part number change on Twiddler
01/01/13	07	54381	New Cinemate 1SR remote – updated IR integration codes db
01/08/13	08		ADDED PROGRAMMED FLASH U601 - Bass Box I/O PCB
05/07/13	09		Added new 1SR DSP PCBs
08/21/13	10	56177	Added new I/O SLABS
09/20/13	11		Added Safety bulletin reference for MOVs
